                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        was prepared, poly(A) was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pbluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or book for the sequence and contains a minimum of 100 bases of phred value 20 or book for the sequence and contains a minimum of 100 bases of phred value 20 or book for the sequence and contains a minimum of 100 bases of phred value 20 or book for the sequence and the sequence 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note="Vector: pBluescript SK(-); Site_1: EcoRI; Site_2: XhoI; Plants were grown at Washington State University, XhoI; Plants were grown at Washington State University and Pullman, WA in a greenhouse, the rachises were excised and frozen in liquid nitrogen (Kleinhofs lab). Site 1: BCORI; Site 2: XhoI; Plants were grown under
hydroponic conditions at UC Davis, salt stressed for 12
hours, and for 7 days, then dissected and frozen (Akhunov
in J Dvorak Lab). Total RNA was prepared from sheath
tissue, equal quantities of RNA were pooled from the two
samples, polyA was purified from the pooled RNA, a cDNA
library was made, and the cDNA clones were in vivo
excised to give pBluescript phagemids in the TJ Close lab
at the University of California, Riverside (Akhunov, Chin
, Choi, Close, Fenton, Kianian, Otto, Simons, Zhang)
. Choi, Close, Fenton, Kianian, Otto, Simons, Zhang)
Plasmid DNA preparations and DNA sequencing were
performed in the OD Anderson lab (all other authors)."

                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB B

Biol. 23:901-904(1993).

-!- FUNCTION: PROBABLE TRANSCRIPTION FACTOR ACTIVE IN INFLORESCENCE
-!- SUBCELLULAR LOCATION: NUCLEAR (By Similarity).

-!- SUBCELLULAR LOCATION: NUCLEAR (By Similarity).

-!- TISSUE SPECIFICITY: EXPRESSED IN PETALS AND WEAKLY IN SEPALS BUT
NOT IN THE COLUMN (GYNOSTEWIUM).

-!- DEVELOPMENTAL STAGE: EXPRESSED IN MATURE FLOWERS AND NOT IN YOUNG
DEVELOPING INFLORESCENCES OR YOUNG FLORAL BUDS.

-!- SIMILARITY: BELONGS TO THE MADS DOMAIN FAMILY OF TRANSCRIPTION
                                                                                                                                                                                                                           the European Bioinformatics Institute. Thuse by non-profit institutions as long

SUBCELLULAR LOCATION: Nuclear (By similarity).
TISSUE SPECIFICITY: Vascular tissue of cauline leaves, fl
shoot apex and valves of carpels and fruits.
INDUCTION: Dramatically up-regulated upon the transition
vegetative to reproductive development.
SIMILARITY: BELONGS TO THE MADS DOMAIN FAMILY OF TRANSCRI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: Probable transcription factor pattern of cell division, expansion and
